Iceland volcanic eruption creates spectacle for tourists 冰岛一座火山喷发 游客前来观赏

文字稿

This volcano in Iceland has erupted spewing red-hot lava and plumes into the air.

冰岛这座火山喷发，向空中涌射出赤热的熔岩和烟雾。

It's located less than 1km away from Mount Fagradalsfjall, the volcano that erupted for six months last year.

喷发地距离法格拉达尔山不到一公里，去年，法格拉达尔火山持续喷发了六个月。

The site is uninhabited but now has become a tourist attraction.

该地曾无人居住，但现已成为旅游胜地。

Hather Hoff, American tourist

"I've been waiting years and years to see lava. It's a life goal. And when I came over that hill, and we decided we're going to come down, and we're going to go closer and it's a risk and we know that but we're going to do it."

海瑟·霍夫 美国游客

我等了很多年才看到熔岩。这是我的一个人生目标。当我翻过那座山时，我们决定要走下来，再走近一点，我们知道这样做很冒险，但还是要这么做。

Anita Sauckel, German living in Iceland

"It's gigantic. I love it. I loved the eruption last year as well. But this is like special with the lava – huge fountains, like popping out in the middle and I love that a lot."

安妮塔·绍克尔 住在冰岛的德国人

这次喷发场面很壮观。我很喜欢看。我也很喜欢去年火山喷发的场面。但这次很特别，熔岩就像巨大的喷泉，从中间喷涌而出，我非常喜欢这个特点。

A series of earthquakes have been detected in the area over the past week.

在过去的一周内，该地区探测到了一连串地震。
